## Simply Smarter Implant Design

The InterActive™ implant body features a straight top 1/3rd with micro-grooves to improve soft tissue attachment and micro-threads to increase stability and reduce stress in the crestal bone area. The quadruple-lead micro-threads transition to double-lead buttress threads over the bottom 2/3rds which is tapered to facilitate insertion into an undersized socket in soft bone providing compression that increases initial stability (G. Niznick: Clinical Oral Health 2000 " Achieving Success in Soft Bone"). The slight body taper of the apical 1/3rd further facilitates self-tapping insertion into dense bone without over-compression.

InterActive features an internal hex conical connection with a 12° bevel for compatibility with InterActive as well as Nobel Biocare's conical connection prosthetics<sup>1</sup>. InterActive prosthetics and healing components are designed with matched transgingival concave emergence profiles to shape soft tissue for improved esthetics.

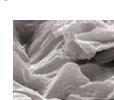

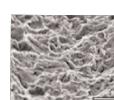

## SBM™ and SBActive™ Surface Options

SBM surface is created by using a Soluble Blast Media of Hydroxylapatite (HA) crystals to create a medium-rough texture. We use the same vendor for its SBM and HA coated surface treatments as used by Paragon Implant Company from 1992-2000 when these studies were conducted. SBActive is a surface that has been prepared using a SBM process and then lightly coated with a layer of highly crystalline Hydroxylapatite. This results in a discontinuous surface with a medium rough texture.

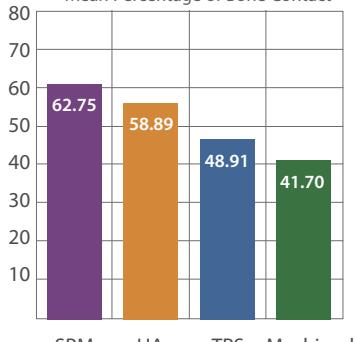

### Animal Studies Bone Response to SBM Surface

#### SEM's of Our Surfaces

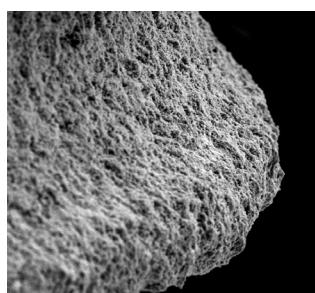

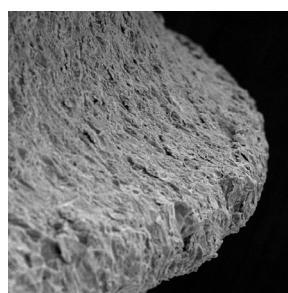

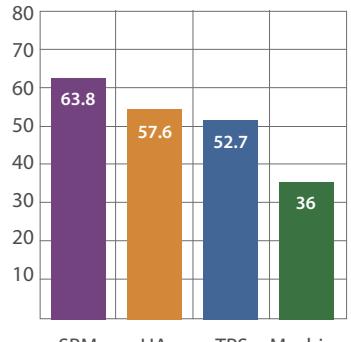

SBM: Blasted with Soluble HA Particles  
SBActive: 10µm layer of HA Particles

Brazilian Study\* Shows SBM Provides Superior Bone Contact  
Mean Percentage of Bone Contact

LSU Study\* Shows SBM Provides Superior Bone Contact

SBM Surface 250X

SBActive Surface 250X

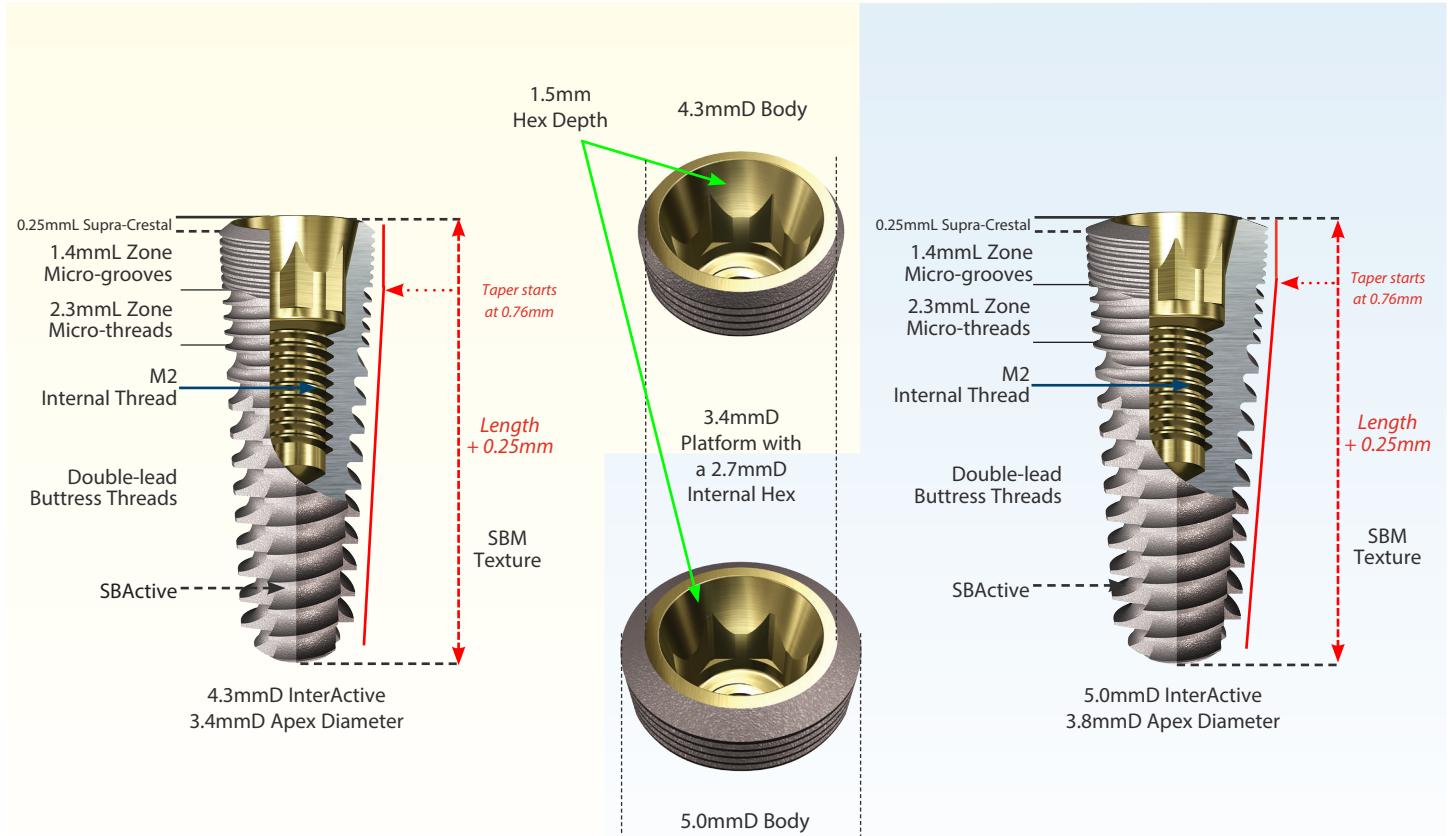

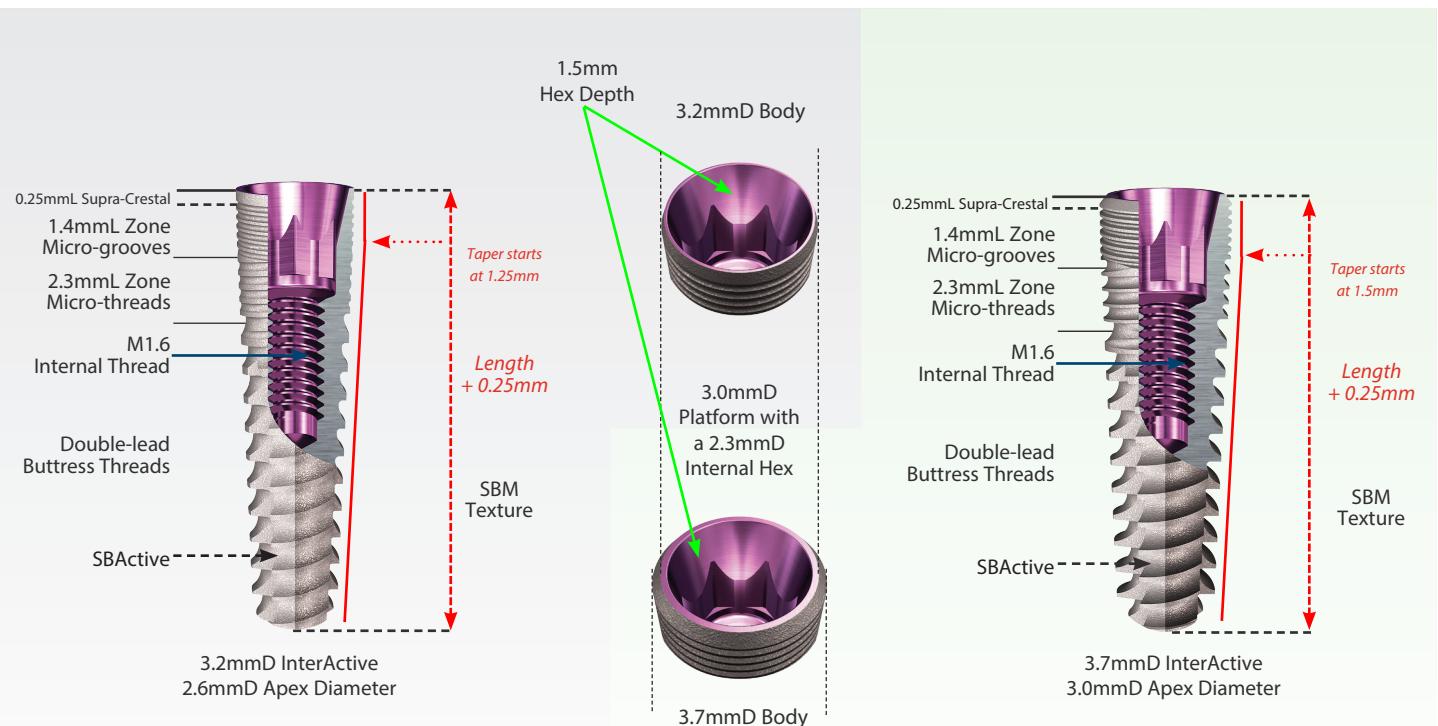

Not all products listed in this catalog are available in all countries. Please contact Implant Direct for more information on product availability.

<sup>1</sup>InterActive implants compatible with NobelBiocare conical connection titanium abutments up to 15° angulation. InterActive straight titanium, straight temporary and 15° angled abutments compatible with NobelBiocare conical connection.

\*Data on file

## InterActive Implant Dimensions

InterActive Implant is mounted on a revolutionary two-piece color-coded fixture-mount. The top fails at excessive torques to protect the interface during insertion and detaches in impression for the accuracy of an open-tray transfer with the simplicity of a closed-tray. The fixture-mount may be shortened at the line to function as a final preparable abutment. A healing collar is included in each vial.

Each implant is packaged in a sterile vial

Vial labels provide two tear-off labels for records

Cap labels are color-coded by platform diameter

Drop implant assembly out of vial onto a sterile surface

Remove implant assembly with a hex tool (HT2.3 or HT2.7)

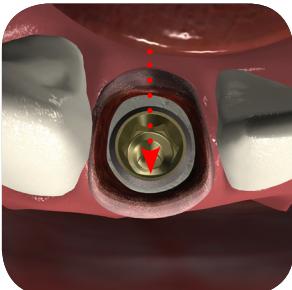

Place implant into osteotomy

Fixture-mount top fails at 90Ncm (3.0mm platform) or 126Ncm (3.4mm)

Index fixture-mount flat to labial or buccal

Hex will then be aligned for proper abutment placement

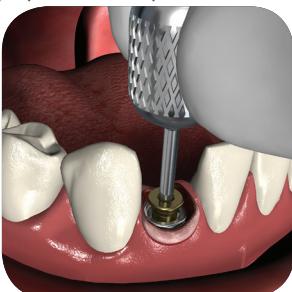

Occlude fixture-mount screw access hole & take an impression

The top of the fixture-mount will be retained within the impression

Loosen screw to remove the remaining abutment

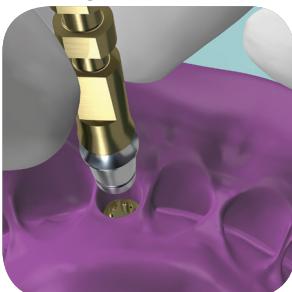

Attach cover screw and extender for one-stage surgery

Suture tissue. Extender will shape to match abutment profile

Attach fixture-mount to an implant analog (abutment analog also available)

Insert assembly into impression with fixture-mount top.

Apply tissue replication material and pour stone model.

Shorten fixture-mount at the groove to create an abutment.

For longer abutment, block out groove with soft wax & lubricate

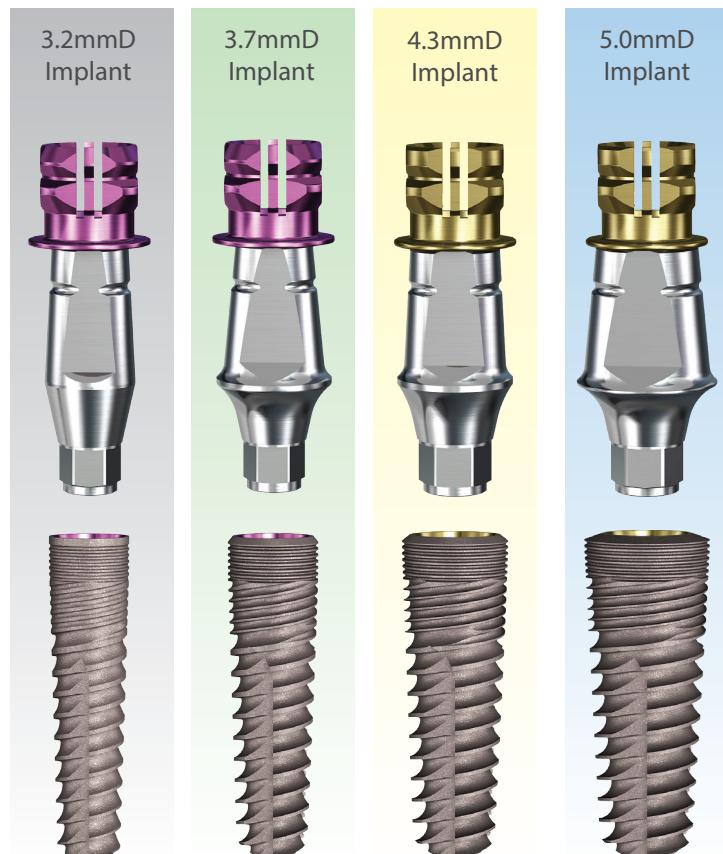

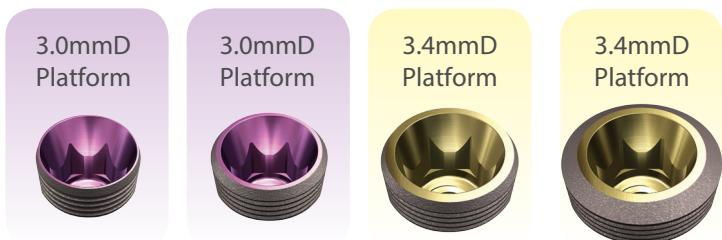

Fabricate restoration following standard techniques

## InterActive Implant System

### Features & Benefits

- Internal conical connection compatible with NobelActive® and NobelReplace® CC abutments<sup>1</sup>
- Revolutionary two-piece fixture-mount. Top includes torque-safety feature and detaches in impression for the accuracy of an open-tray transfer with the simplicity of a closed-tray. This technique supports both implant-level and abutment-level impressions.
- 2mm extender retained by cover screw for use as a platform-shifting healing collar for one-stage surgery features a concave transgingival profile which matches the fixture-mount.
- Micro-grooves to improve soft tissue attachment
- Micro-threads to increase stability and reduce stress in crestal bone area
- Three long cutting grooves for self-tapping insertion extend 2/3rds length up the implant
- Surface options: SBM (Soluble Blast Media) textured or SBActive™ light HA coating

CustomDirect™ patient-specific abutments and bars are perfectly paired with our implant expertise for a secure fit with a wide-range of industry-compatible connections. Abutment blanks are produced with the interfaces via the same process as our stock abutments and implants prior to supragingival customization. In addition, the robotic machining centers for bar fabrication derive machining programs from those utilized for the manufacture of the mating multi-use abutments and implants. Our custom design center is available to help create the patient-specific design for either restoration type. For abutments, you can also choose to submit your own electronic design file.

## To Scan & Plan

- 1 Purchase the scan adapter of your choice
- 2 You will receive an email with a link to the library download site
- 3 Choose the library you need based upon the scanning software you use
- 4 Download and install – you are now ready to start scanning Implant Direct scan adapter and designing your abutment
- 5 Simply attach the file to your CustomDirect abutment order and let us handle the rest!

# InterActive™

NobelActive™ Compatible Conical Connection<sup>1</sup>  
with Simply Smarter Surgical & Restorative Design

## Simply Smarter Surgery

### Neck Matched to Major Diameter

- Seals opening at crest of ridge reducing need for bone grafting

### Micro-threads and Grooves

- Micro-grooves to improve tissue attachment and micro-threads to increase stability and reduce stress in crestal bone area

### Cutting Edge of Grooves

#### Face Clockwise

- Three long grooves for self-tapping insertion

### Apical 1/3rd Tapers 2°

- Slight body taper increases initial stability without over-compression and facilitates self-tapping insertion in dense bone

### Rounded Apex

- Reduces risk during insertion of implant diverging from path created by drilling and the risk of sinus perforation

**Reality Check**  
Nobel Customers Save \$553!

### All-in-1 Packaging

Includes implant, cover screw, healing collar & new fixture-mount that provides simply accurate impression taking as well as functions as a preparable abutment
