Dr. Ana Ferro, a Periodontist and head of surgery at the Malo Clinic in Portugal, Is a key opinion leader for NobelBiocare, promoting its All-on-4 treatment concept for edentulous jaws. She posted on Linkedin, an X-ray of an All-on-4 case in the lower jaw with the typical tipped distal implants and asked the question: "What would you change in dentistry? If you had 3 wishes, what would they be?

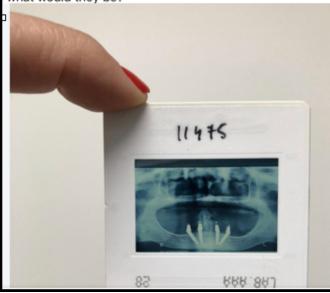

I posted my 3 wishes. I doubt it was what she was expecting as answers!

What would you change in dentistry? If you had 3 wishes what would they be?

Gerald Niznick DMD, MSD

Dental Implant Pioneer

"What would you change in dentistry? If you had 3 wishes, what would they be?" Answer: I would change the All-On-4 mindset of using tipped implants in the edentulous lower jaw with expensive angled abutments. All-on-5 straight 1-piece implants are stronger, less expensive and provides redundancy for long term success.

And for my second wish I would want Dentists to appreciate the value of making maximum use of available bone when restoring the edentulous maxillary arch

"What would you change in dentistry? If you had 3 wishes, what would they be?"
And my third wish would be that dentists be more

And my third wish would be that dentists be more discerning about dental implant manufactures' claims of their new products and features which often are designed primarily to justify high prices.

https://www.niznick.com/contro_2014/ MucoIntegration.pdf

NobelBiocare's Linkedin postings promote the NobelActive with what it calls TiUltra, the top 2mm colored gold by anodizing, Nobel created a new marketing story claiming soft tissue attachment, which it trademarked the new name "Mucointegration". The posting asked the question "What is your favorite color" Dr. Nürnick responded "I don't think fibroblasts have a favorite color!"
